
training view
deployed, orbit 20°
measured silhouette
given to the policy
one instrument: the robot's encoders, kinematic model and silhouette
Look
$r(q,\eta_0) > \tau$?
yes
Measure
$\hat{\eta} = \mathrm{argmin}_\eta \Sigma_k d_k$
Predict
ident × invert
no: raw frame
no: 7 poses
Frozen π
$a = \pi(o')$
Verify
$F_1 \geq 0.75$
Undo
$o' = T_{\hat{\eta}}(o)$
d_k: silhouette distance at arm pose q_k; $T_{\hat{\eta}}$: depth re-rendering
